

Ricevitore a coesore Coherer receiver

[replica]

Ricevitore a coesore che veniva inserito nel fuoco di uno specchio metallico cilindrico-parabolico, impiegato da Marconi nelle prime esperienze di radiotelegrafia a Villa Griffone e nelle dimostrazioni londinesi, 1894-1896.

Coherer receiver which was placed in the focus of a parabolic cylinder shaped metal mirror and used by Marconi in the first wireless telegraphy experiments at Villa Griffone and in the demonstrations which took place in London, 1894-1896.
